WORKING PAPER

(1) Linked Out? A Field Experiment on Discrimination in Job Network Formation

with Yulia Evsyukova and Wladislaw Mill (*Working Paper*)

We assess the impact of discrimination on Black individuals' job networks in the U.S. using a two-stage field experiment with 400+ fictitious LinkedIn profiles. Varying race via A.I.-generated images only, we find that Black profiles' connection requests are accepted at significantly lower rates (Stage I) and their networks provide less information (Stage II). Leveraging our experimental design to eliminate first-stage endogeneity, we identify gatekeeping as the key driver of Black-White disparities. Examining users' CVs reveals widespread discrimination across different social groups and – contrary to expert predictions – stronger discrimination among women and younger users.

WORK IN PROGRESS

(1) Broadcasting Change : India's Community Radio Policy and Women's Empowerment

(*Poster ASSA 2024*)

This article investigates the use of grassroots media as a policy to foster development. In particular, it examines India's 2006 community radio policy, which allows educational institutions and NGOs to seek radio licenses to promote local development. I collect unique data on the >250 radios launched by 2020, their coverage, and content and estimate effects on women's empowerment, one of the radios' main topics. This is done by exploiting topography-driven variation in radio access in combination with a novel approach to reduce measurement error and bias in Demographic and Health Surveys' randomly jittered coordinates. The results demonstrate that grassroots media is effective in influencing behavior and attitudes toward and of women. Exogenous exposure to community radio increases girls' education, delays the marriage of young women, decreases fertility, and increases young women's autonomy. Overall, this suggests that 'grassroots media for development' is an effective, financially sustainable, and scalable policy.

(1) Few Voices, Strong Echo : Measuring Follower Homogeneity of Politicians' Twitter Accounts

New Media & Society, 2022 (*Paper*)

Politicians have discovered Twitter as a tool for political communication. If information provided by politicians is circulated in ideologically segregated user networks, political polarization may be fostered. Using network information on all 1.78 million unique followers of German Members of Parliament by October 2018, follower homogeneity across politicians and parties is measured. While the overall homogeneity is low, politicians of the AfD - a right-wing populist party - stand out with very homogeneous follower networks. These are largely driven by a small group of strongly committed partisans that make up around 7 percent of the party's but around 55-75 percent of the average AfD politician's followers. The findings add to the literature by showing potentially unequal distributions of network segregation on Twitter. Further, they suggest that small groups of active users can multiply their influence online, which has important implications for future research on echo chambers and other online phenomena.
