### (1) Linked Out? A Field Experiment on Discrimination in Job Network Formation

*with Yulia Evsyukova and Wladislaw Mill [Paper]*

R&R at Quarterly Journal of Economics

We assess the impact of discrimination on Black individuals' job networks in the U.S. using a two-stage field experiment with 400+ fictitious LinkedIn profiles. Varying race via A.I.-generated images only, we find that Black profiles' connection requests are accepted at significantly lower rates (Stage I) and their networks provide less information (Stage II). We leverage our experimental design to eliminate first-stage endogeneity and identify gatekeeping as the key driver of Black-White disparities. Based on users' CVs we find widespread discrimination across different social groups with heterogeneity unanticipated by experts.

### (1) Broadcasting Change : India's Community Radio Policy and Women's Empowerment

Award for best applied paper by a young researcher – Econometric Society Europe Meeting (ESEM) 2024

Can grassroots media serve as an effective policy tool for development? I investigate India's 2006 community radio policy which permits educational institutions and NGOs to obtain radio licenses with the purpose of promoting local development. For this, I collect unique data on the content and coverage areas of >250 radios. Through topic modeling and GPT-based content analysis, women's empowerment is identified as a key theme in radio programming. To causally investigate the effects of radio on women's empowerment, I leverage topography-driven variation in radio access in combination with a novel approach to reduce attenuation bias in randomly jittered survey coordinates. Exogenous exposure to community radio enhances girls' education, delays marriage, reduces fertility, and increases young women's autonomy.

### (1) Few Voices, Strong Echo : Measuring Follower Homogeneity of Politicians' Twitter Accounts

*New Media & Society, 2024 [Paper]*

Politicians have discovered Twitter as a tool for political communication. If information provided by politicians is circulated in ideologically segregated user networks, political polarization may be fostered. Using network information on all 1.78 million unique followers of German Members of Parliament by October 2018, follower homogeneity across politicians and parties is measured. While the overall homogeneity is low, politicians of the AfD - a right-wing populist party - stand out with very homogeneous follower networks. These are largely driven by a small group of strongly committed partisans that make up around 7 percent of the party's but around 55-75 percent of the average AfD politician's followers. The findings add to the literature by showing potentially unequal distributions of network segregation on Twitter. Further, they suggest that small groups of active users can multiply their influence online, which has important implications for future research on echo chambers and other online phenomena.
